

Changes:

1. We stored the stories as a list of submissions instead of one text string. This was done due to errors with `\n` in sqlite commands, and `
` not rendering. Because of this we iterated through the list in the Jinja2 html template.
2. We added a case for what happens if there are no stories to be added to.
3. We added a refresh button to `add.html` for when the user does not wish to add to the current story.
4. We also changed the minimum number of words to add and create to 7 instead of 2.
